Instructions

Before Use

Ensure your skin is clean, dry and free from moisturizers and oils. For that low cut dress or top you have the option of utilising the line that corresponds to your cup size and cut along the line as shown with sharp scissors. If you are a larger C cup, no cutting is needed. If the Invisilifts are showing over a low cut neckline, simply peel up and trim the exposed edge.

Instructions for Use

Simply apply the whole Invisilifts panel or cut the custom fit forms according to your cup size. Then crack and peel the lower half of the Invisilift. Notice that the Invisilift is applied just above the areola, so the crescent shape of the Invisilift is pointed DOWNWARD.

Smooth the adhesive side to the topside of your breast just outside the areola. Then remove the backing from the upper portion of "Invisilift" to the desired position and press, that's it!

Repeat the same procedure on your other side. Notice that you only need to use one Invisilift on each breast. Experiment with the size of lift that is most comfortable to you. If you'd like more support, simply leave the Invisilifts larger.

Removing Invisilifts

To remove the Invisilift start by peeling slowly from the lower portion of the outer part of the breast (keep in mind that the invisilift has been supporting the weight of your breast for a number of hours) lift and peel slowly upward removing the inside lower part last and like removing any adhesive from your skin it will sting a little.

Invisilifts are waterproof and hypo-allergenic. However, if redness occurs, wait a day before resuming use. In the unlikely event that any redness or irritation persists, discontinue use. Suntanned or sunburned skin may be more sensitive in the breast area. Wait until your sunburned skin is healed before applying Invisilifts.
